

## MEDICAL DEVICE DEVELOPMENT

**Do you have an idea for a medical device? The Center for Medical Innovation at the University of Utah is the place to put your idea into motion.**

### **How It Can Help:**

The center creates a one-stop-shop environment that assists both the novice and experienced innovator through ideation, concept generation, intellectual property, market analysis, prototyping and testing, business plan development, and commercialization.

### **Detail Description:**

By combining industry-leading experts from engineering, medicine, business, law and commercialization, the Center for Medical Innovation can provide formal education programs, resources for prototyping and business creation, and facilitation of real-world feedback for successful device development and commercialization.

Building on the University of Utah's fundamental legacy of pioneering medical innovation, the vibrant innovation ecosystem within the Center for Medical Innovation has produced hundreds of new medical devices and digital health care applications since its inception in 2012.

### **How Much Does it Cost:**

- Dependent on Scope of Work

### **What Can I Expect:**

The Center primarily services the innovation coming from the University research and medical staff, but they can help other outside the university.

### **How to Get Started:**

- Contact the Center at: <https://uofuhealth.utah.edu/center-for-medical-innovation>
